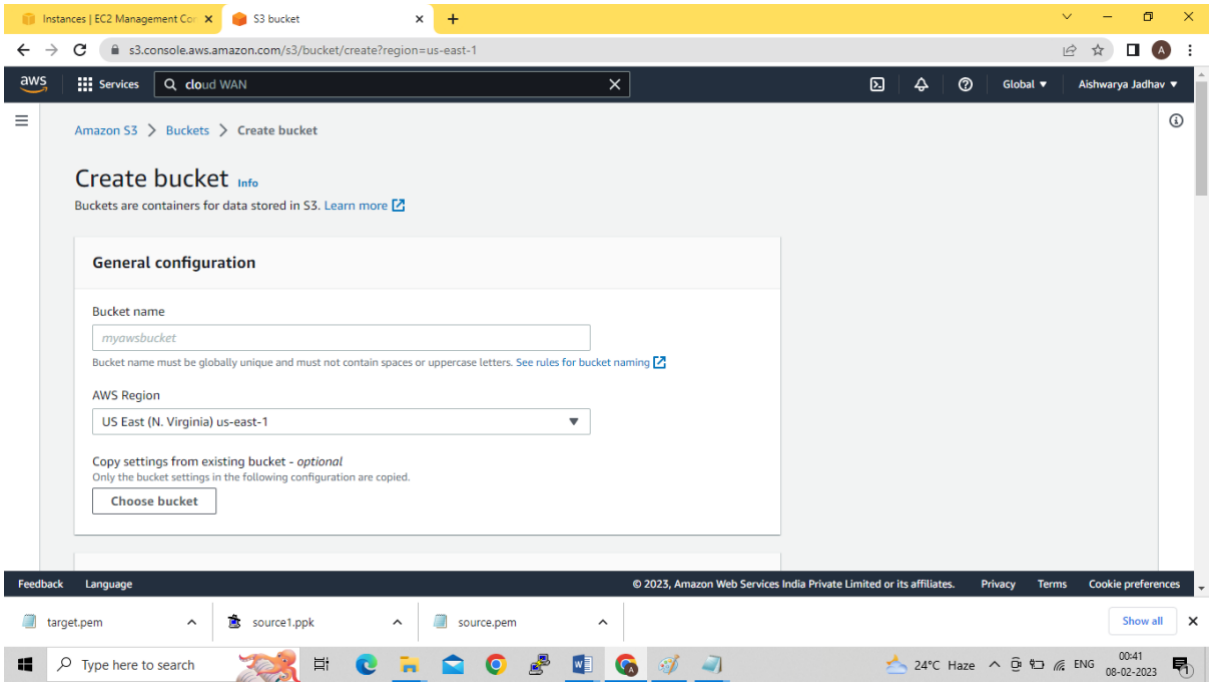
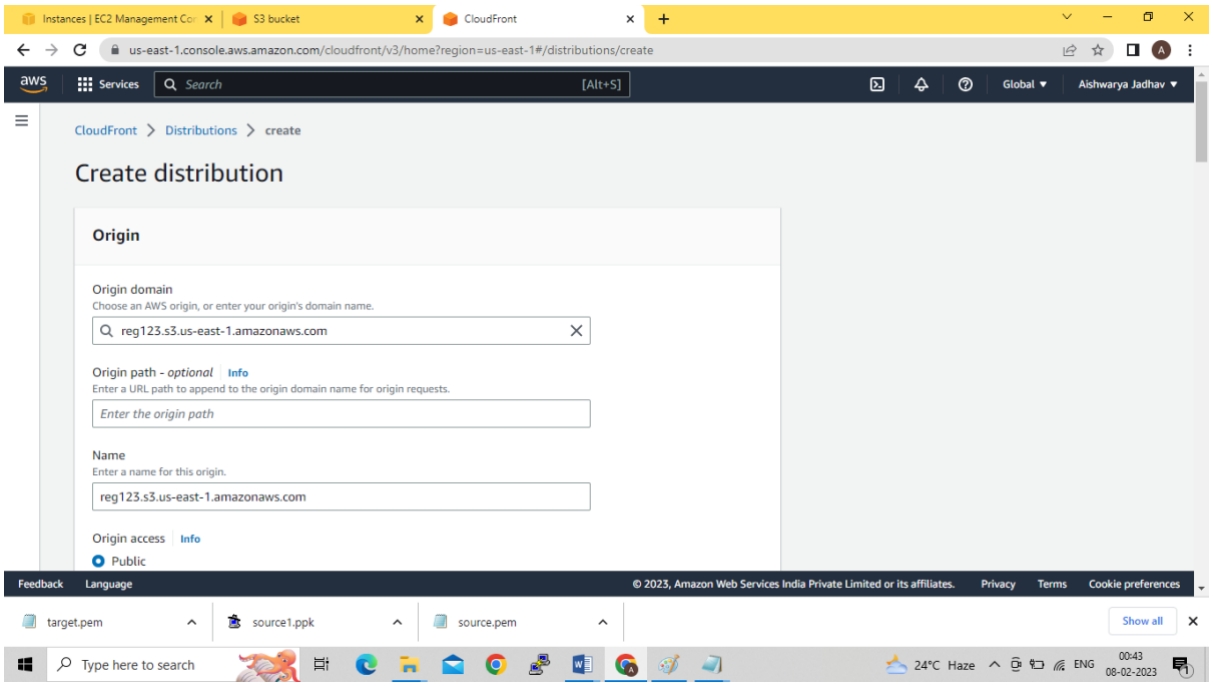
HOW TO CREATE DISTRIBUTE DATA FOR EDGE LOCATION USING CLOUDFRONT

Step 1.first create a bucket in s3



Step 2. Open cloudfront and click on create distribution



Step 3. Select the bucketname which we created in S3

Step 4.now follow the below steps to create distribution

-enable public assign id

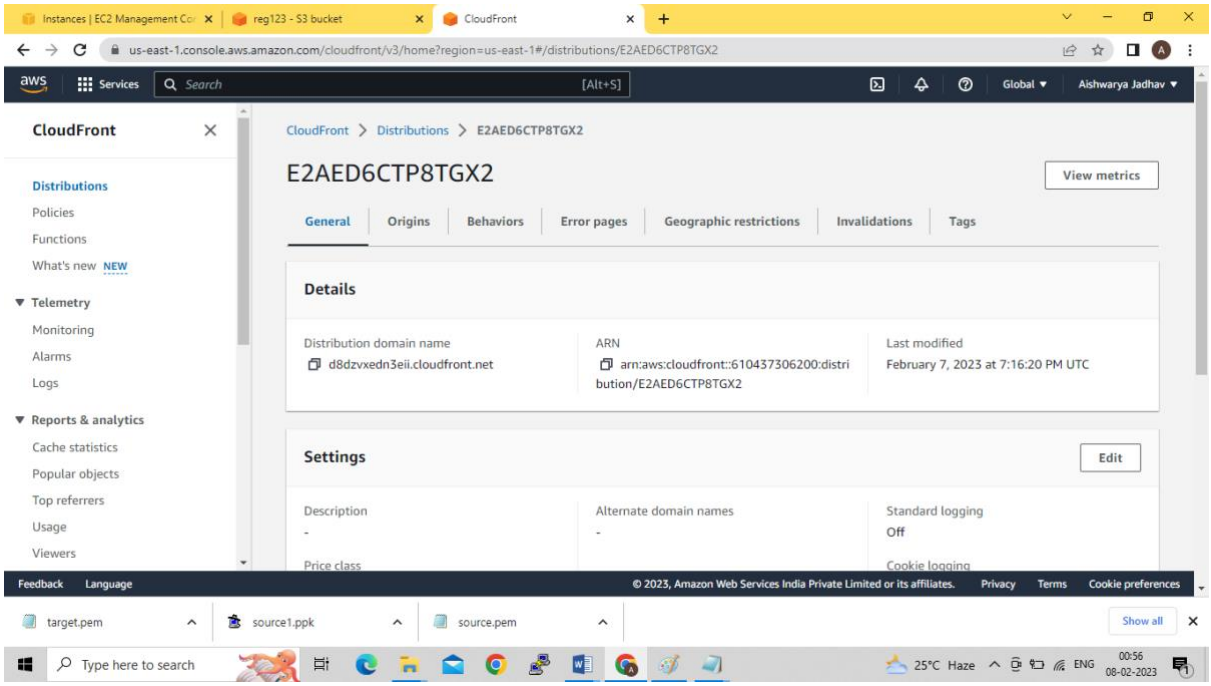
-shield enable

-select region

-use all edge location

-in default root(index.html)

-click on create distribution



Step 5. Now upload objects in your created bucket.

Step 6.after upload make it acess public to objects uploaded in bucket

Step 7.now copy the domain name ip and paste url in browser.

Step 8.your upload object/file/image will be uploaded on that page.
